BRÜHWILER

Brühwiler Maschinen AG was founded in Switzerland in 1958 by Walter Brühwiler . He specialised in the trade and repair of forestry and carpentry machines. The company soon became known throughout Switzerland. Through close contact with our customers, we recognised the need for customised machines. So in 1998 we began to develop and produce gauges and machines for carpentry workshops. New products were added continuously. Today, Brühwiler machines are used in over 40 countries.

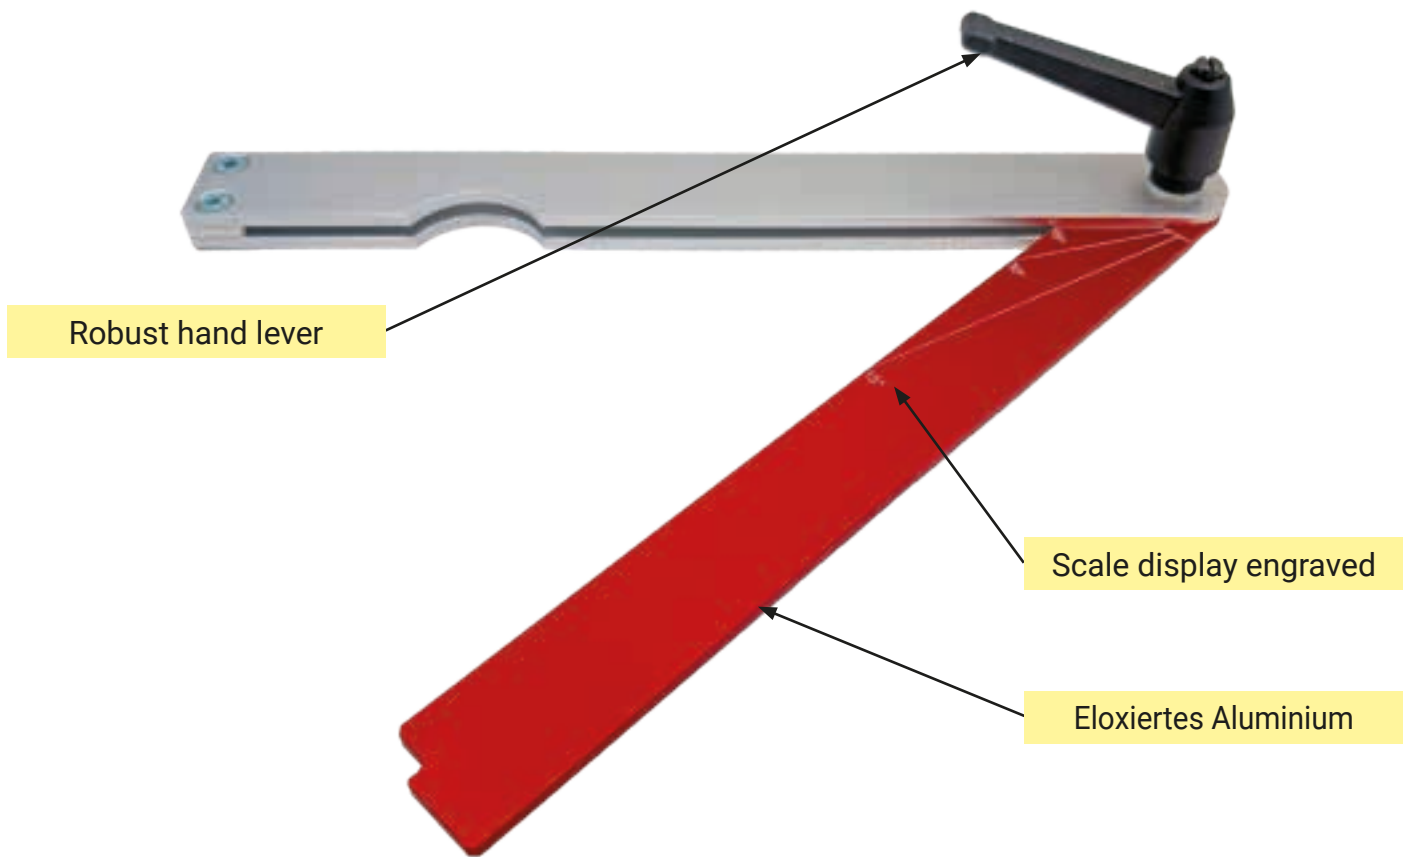

Brühwiler products are characterised by their ease of use and high quality. Whenever possible, we avoid plastic parts and prefer to manufacture them from milled aluminium. All guide shafts are hard chrome plated and all motors are made in Germany. The machines are available in 230V or 120V, as well as in metric or inch scale. To fulfil our high standards, all milling chains are manufactured in-house.
